Patent Claims

- 1. Method for transmitting audio signals between a transmitter and at least one receiver according to the method of prioritizing pixel transmission, characterized by the steps:
- a) resolving the audio signal into a number n of spectral components,
- b) storing of the resolved audio signals in a two-dimensional array with a multiplicity of fields, with frequency and time as dimensions and the amplitude as particular value to be entered in the field,
- c) forming of groups from each individual field and at least two fields of the array adjacent to this field,
- d) assigning a priority to the individual groups, the priority of one group becoming greater the greater the amplitudes of the groups values and/or the greater the amplitude differences of the values of a group and/or the closer the group is to the current time, and
- e) transmitting the groups to the receiver in the sequence of their priority.
- 2. Method as claimed in claim 1, characterized in that the entire audio signal exists as an audio file and is processed and transmitted in its entirety.
- 3. Method as claimed in claim 1, characterized in that only a portion of the audio signal is processed and transmitted in each instance.
- 4. Method as claimed in one of claims 1 to 3, characterized in that the audio signal is resolved into its spectral components by means of FFT.
- 5. Method as claimed in one of claims 1 to 3, characterized in that the audio signal is resolved into its spectral components through a number **n** of frequency selective filters.

- 6. Method as claimed in one of claims 1 to 5, characterized in that in the receiver the groups transmitted in accordance with their priority are assigned to a corresponding array, the values of the array still to be transmitted being calculated through interpolation from the already available values.
- 7. Method as claimed in one of claims 1 to 6, characterized in that from the existing and calculated values in the receiver an electric signal is generated and converted into an audio signal.
